

MediFlags QuikTips and Pathology interpretations

MediFlags has a range of supporting materials incorporated into the program. These QuikTips are provided as background information to assist accredited pharmacists during their report writing.

There are around 200 QuikTips in MediFlags in pdf form; these are sourced (with permission) from:

- NPS MedicineWise
 - NPS News
 - Prescribing Practice Review (PPR)
 - NPS RADAR
 - Australian Prescriber new drugs comments
 - relevant NPS fact sheets and position statements

QuikTips are attached to individual flags and are accessed via the QT button adjacent to that flag.

Additionally, pathology interpretations (see examples below) addressing all common tests encountered in medication review have been written specifically for MediFlags to address relevant issues in the older person.
